

CONTENTS

PART I

I.	Outline of the GH80-5 cruise <i>Seizo Nakao, Koji Onodera, Kensaku Tamaki, Masato Joshima, Akira Usui, Akira Nishimura and Katsuya Tsurusaki</i>	1
II.	Magnetic anomalies of the GH80-5 survey area in the Central Pacific Basin <i>Kensaku Tamaki and Masato Joshima</i>	20
III.	Gravimetric survey in the GH80-5 cruise <i>Masato Joshima</i>	23
IV.	Substrate structure by 3.5 kHz SBP in the GH80-5 area <i>Seizo Nakao</i>	35
V.	Seismic reflection survey in the Central Pacific Basin during GH80-5 cruise <i>Kensaku Tamaki</i>	43
VI.	Heat flow measurement in the GH80-5 area <i>Masato Joshima</i>	53
VII.	Deep-sea sediments in the GH80-5 area in the northern vicinity of the Magellan Trough <i>Akira Nishimura</i>	67
VIII.	Geotechnical properties of deep-sea sediments in the GH80-5 area <i>Katsuya Tsurusaki</i>	90
IX.	Local variability of manganese nodule deposits in the GH80-5 area <i>Akira Usui and Seizo Nakao</i>	106

PART II

X.	Remanent magnetization of sediment cores in the GH80-5 survey area <i>Masato Joshima and Akira Nishimura</i>	165
XI.	The vertical change of the clay mineral composition in some deep-sea cores raised from the northern part of the Central Pacific Basin <i>Saburo Aoki</i>	193
XII.	Major element chemistry of Pacific marine sediments around 10°N and 174°W: samples for GH80-5 cruise, Geological Survey of Japan <i>Ryuichi Sugisaki and Koshi Yamamoto</i>	198
XIII.	Minor chemical composition of deep-sea sediments from the GH80-5 area in the Central Pacific Basin <i>Naoki Mita and Seizo Nakao</i>	215
XIV.	Mineralogy and internal structure of manganese nodules of the GH80-5 area <i>Akira Usui</i>	227
XV.	Local variability of manganese nodule chemistry and its relationship to mineralogy in the GH80-5 area <i>Akira Usui and Tsunekazu Mochizuki</i>	242
