

*Directory of
Geoscience Organizations
of the World 2017*

Geological Survey of Japan, AIST

The Second Edition of the Geological Map of Fuji Volcano has been published in 2016, a half century after the First Edition in 1968.

Mt. Fuji (3776m) has been dormant for more than three centuries since its last eruption in 1707. However, once it erupts, serious impact is expected over large areas including the Tokyo Metropolitan area. Responding to the discussion in the Cabinet Office, the Geological Survey of Japan has been conducting field and laboratory works to study the whole area of the volcano for more than 15 years and revealed more precise eruption history and found many unknown craters from the top to the foot. With a lot of valuable information, the totally revised map is expected to make great contribution to preventing and mitigating the disasters, as well as predicting future eruption.

For details, see the following URL: https://gbank.gsj.jp/volcano/Act_Vol/fujisan/index-e.html

Cover:

Mt. Fuji and the Omuroyama scoria cone (left front) mirrored on the Lake Motosu (front cover), and Mt. Fuji silhouetted against sunset, from the Tokyo Bay area (back cover). (photos by Dr. Shun Nakano, GSJ)

Directory of Geoscience Organizations of the World

2017

Geological Survey of Japan
National Institute of Advanced Industrial Science and Technology

Preface

We are pleased to send the 2017 version of the “Directory of Geoscience Organizations of the World.”

This directory includes the contact information of major government/quasi-government organizations relating to geological surveys and earth scientific researches as of the end of 2016. We hope it will be of some help in getting contact with these organizations. To keep the Directory updated, we ask for your cooperation to inform us any changes or mistakes in your contact information.

The web version is updated as needed. Please visit the URL below to get the latest version:
